# EASY blank wax

## CAD/CAM wax blank

CAD/CAM wax blank for the production of digitally designed crowns and bridges for press and casting techniques.

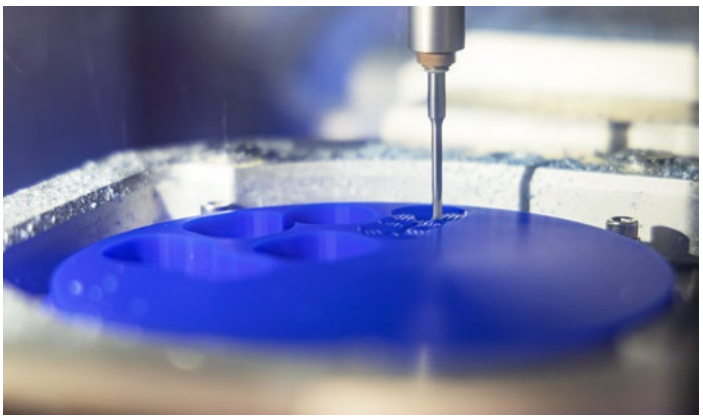

### Advantages

- Precisely milled results with extremely smooth surfaces and strong edge stability due to the high degree of material homogeneity.
- Especially suitable for full ceramic restorations as the wax will burn-out without residue.
- Reliable milling process due to small milled chips which do not stick to the cutter or the object surface.

### Details

- The Renfert EASY blank wax is the optimal CAD/CAM wax blank for milled restorations in the customarily Renfert quality "made in Germany".
- "Making work easy" stands for outstanding product characteristics, e.g. high material homogeneity.
- This allows, amongst other things, a perfect fit and surface quality to be achieved in the final restoration.

No clogging of the cutter thanks to small chip formation
